

1. The metrics from the VM Scale Set instance--this will show CPU %, Available Memory %, Information about the Disk, and information about the bytes sent and received. There will be 5 graphs which display this data  
*Note: in project specification is mentioned There will be 7 graphs that display this data, so I add the graphs from aggregate charts*

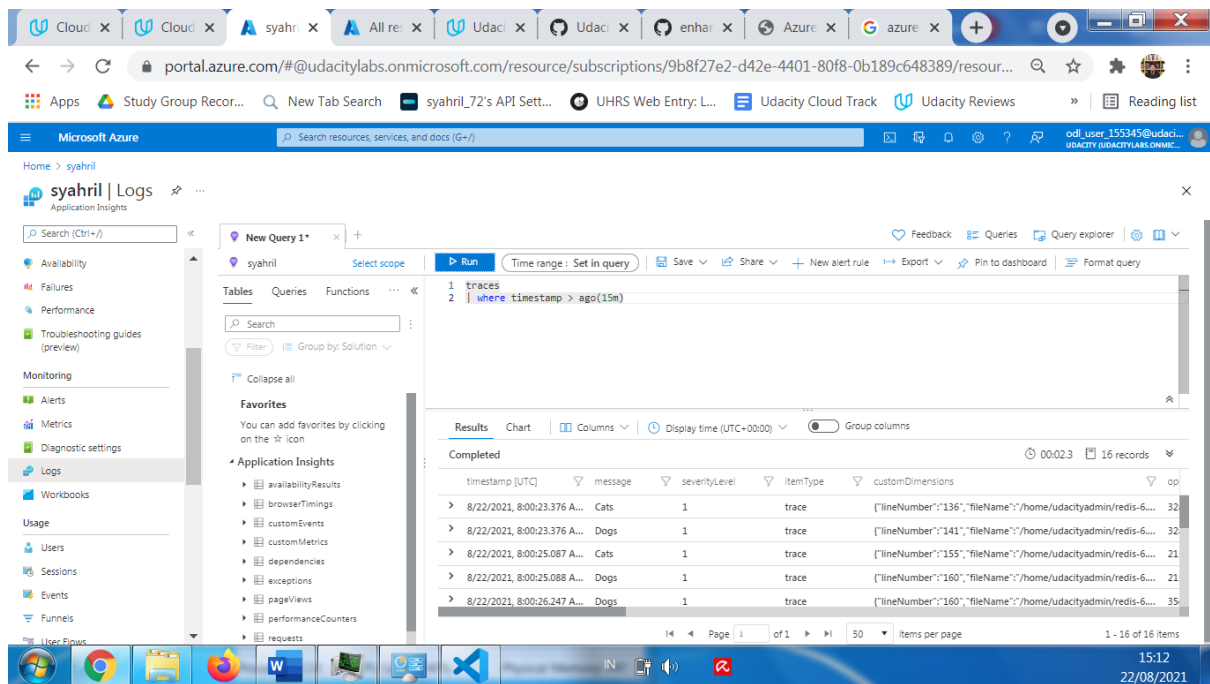

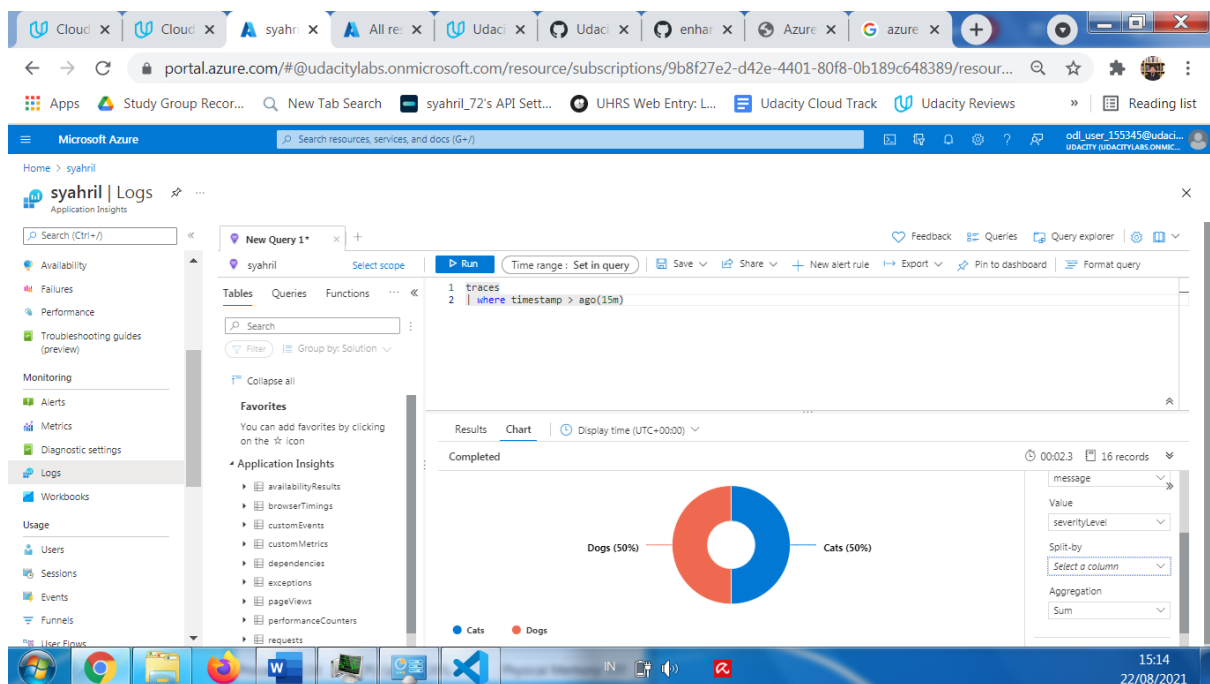

## 2. Application Insight Events which show the results of clicking 'vote' for each 'Dogs' & 'Cats'

### 3. The output of the traces query in Azure Log Analytics

### 4. The chart created from the output of the traces query.

From Project Specification:

- provide a screenshot of the resource group containing your running resources

The screenshot displays the Microsoft Azure portal interface. The browser address bar shows the URL `portal.azure.com/#blade/HubsExtension/BrowseAll`. The page title is "All resources" for the subscription "Udacity (udacitylabs.onmicrosoft.com)". The resource group is filtered to "cloud-demo-155318". The table lists 11 resources, all located in "West US".
